# Directories to be shared (space or CSV list).
# Ex: USHARE_DIR=/dir1,/dir2
USHARE_DIR=/mmc/movies,/mmc/music

# Use to override what happens when iconv fails to parse a file name.
# The default uShare behaviour is to not add the entry in the media list
# This option overrides that behaviour and adds the non-iconv'ed string into
# the media list, with the assumption that the renderer will be able to
# handle it. Devices like Noxon 2 have no problem with strings being passed
# as is. (Umlauts for all!)
#
# Options are TRUE/YES/1 for override and anything else for default behaviour
