You are here: **DD-WRT wiki mainpage** / **Scripting** / **SSH/Telnet & The CLI** / **ip command**

This is an infant page. Clean it up and fill it with content!

Contents

Basic Usage

As always, things in [ ] are optional and | means or

```
ip [ OPTIONS ] OBJECT { COMMAND | help }
```

Ex: To get help on the *link* object, one would enter

```
ip link help
```

OBJECTs

Objects can be any of the following. (A short description of each should be added)

```
link
kkl
route
rule
neigh
tunnel
maddr
mroute
monitor
```

OPTIONS

Options can either be the short or long version
Ex: *ip -V* is the same as *ip -Version*

```
-V[ersion]
-s[tatistics]
```

```
-r[esolve]
-n[num tables]|
-f[amily]
-o[neline]
```

family

Family itself can take additional options:

```
inet
inet6
ipx
dnet
link
```
