

## Tc\_command

You are here: [DD-WRT wiki mainpage](#) / [Scripting](#) / [SSH/Telnet & The CLI](#) / [tc](#)

The definitive [tc manpage](#).

A good [wonder shaper explanation](#) this also includes a good explanation of why qos does not work until you set the uplink and downlink values to slightly below your connections actual values. This is the most common reason QoS does not work.

A common request is [Rate limiting a single host or netmask](#)

[Linux Advanced Routing & Traffic Control](#)

This [user guide](#) is a good read in limiting/shaping the total bandwidth of the network.
